

ROS机械臂开发：从入门到实战

—— 第10讲：针对工业应用的ROS-I又是什么

主讲人 胡春旭

机器人博客“古月居”博主

《ROS机器人开发实践》作者

武汉精锋微控科技有限公司 联合创始人

华中科技大学 自动化学院 硕士

-  1. ROS-I框架介绍
-  2. ROS-I应用原理
-  3. ROS-I代码浅析

1. ROS-I框架介绍

1. ROS-I框架介绍

1. ROS-I框架介绍

The ROS-Industrial Open Source project began as the collaborative endeavor of **Yaskawa Motoman Robotics**, **Southwest Research Institute**, and **Willow Garage** to support the use of ROS for manufacturing automation.

- ROS-Industrial Consortium Americas , Led by SwRI,
- ROS-I Consortium Europe, led by Fraunhofer IPA in Stuttgart, Germany
- ROS-Industrial Consortium Asia Pacific, led by ARTC and NTU in Singapore.

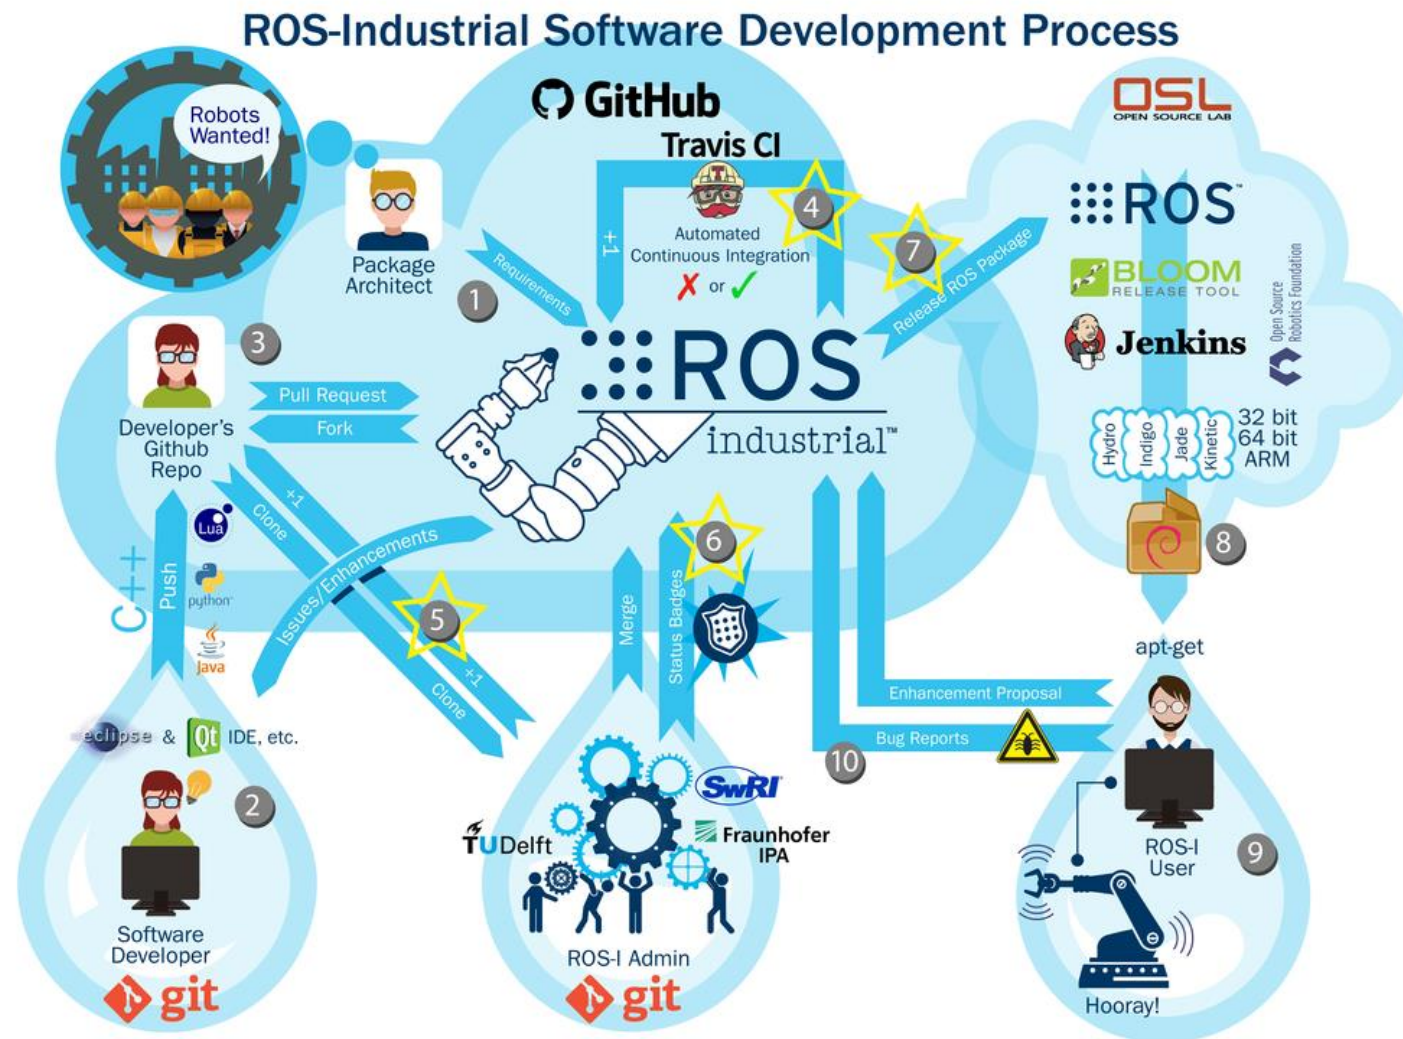

1. ROS-I框架介绍

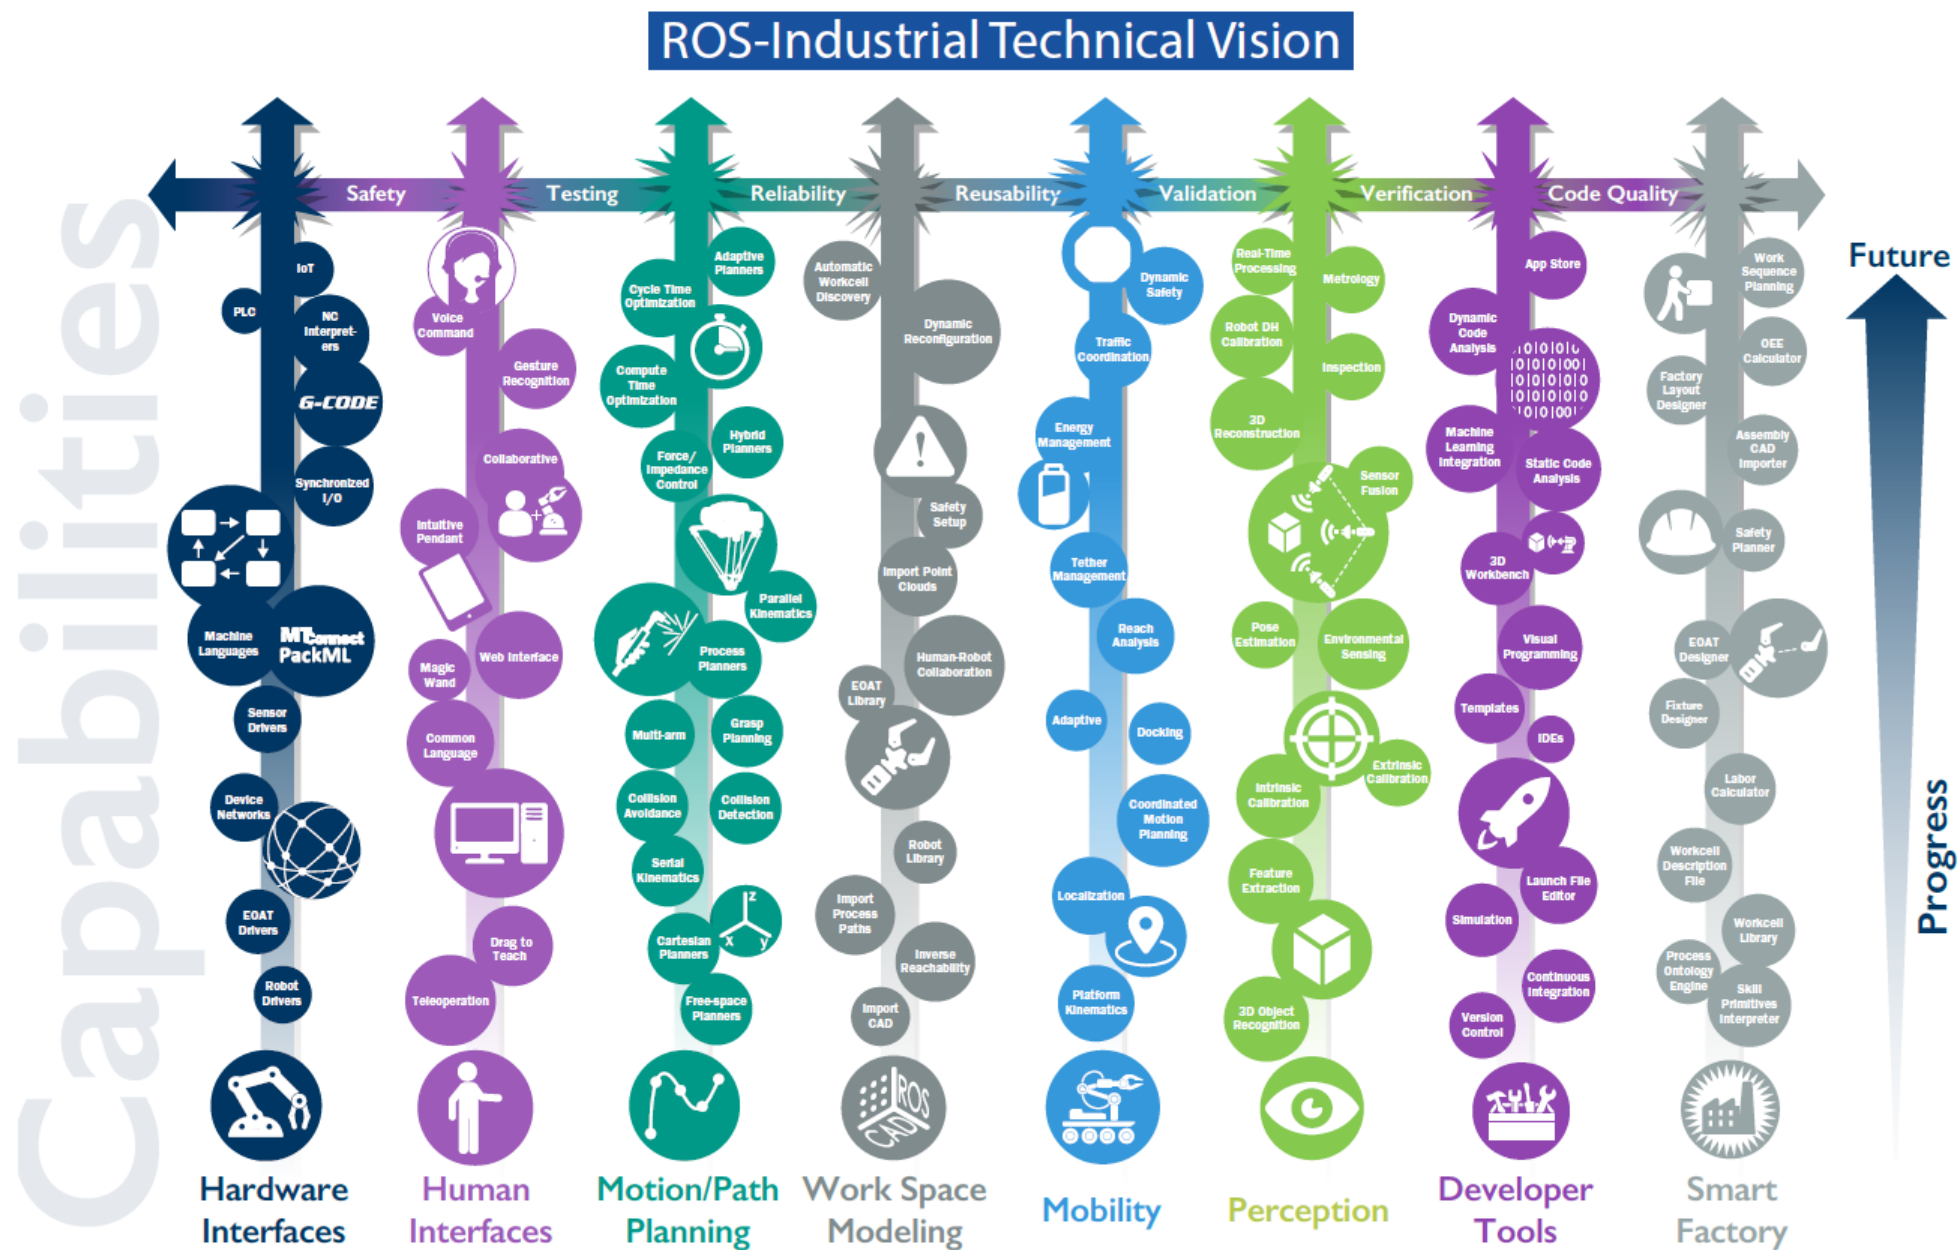

➤ ROS-I的目标

- 将ROS强大的功能应用到工业生产的过程中；
- 为工业机器人的研究与应用提供快捷有效的开发途径；
- 为工业机器人创建一个强大的社区支持；
- 为工业机器人提供一站式的工业级ROS应用开发支持。

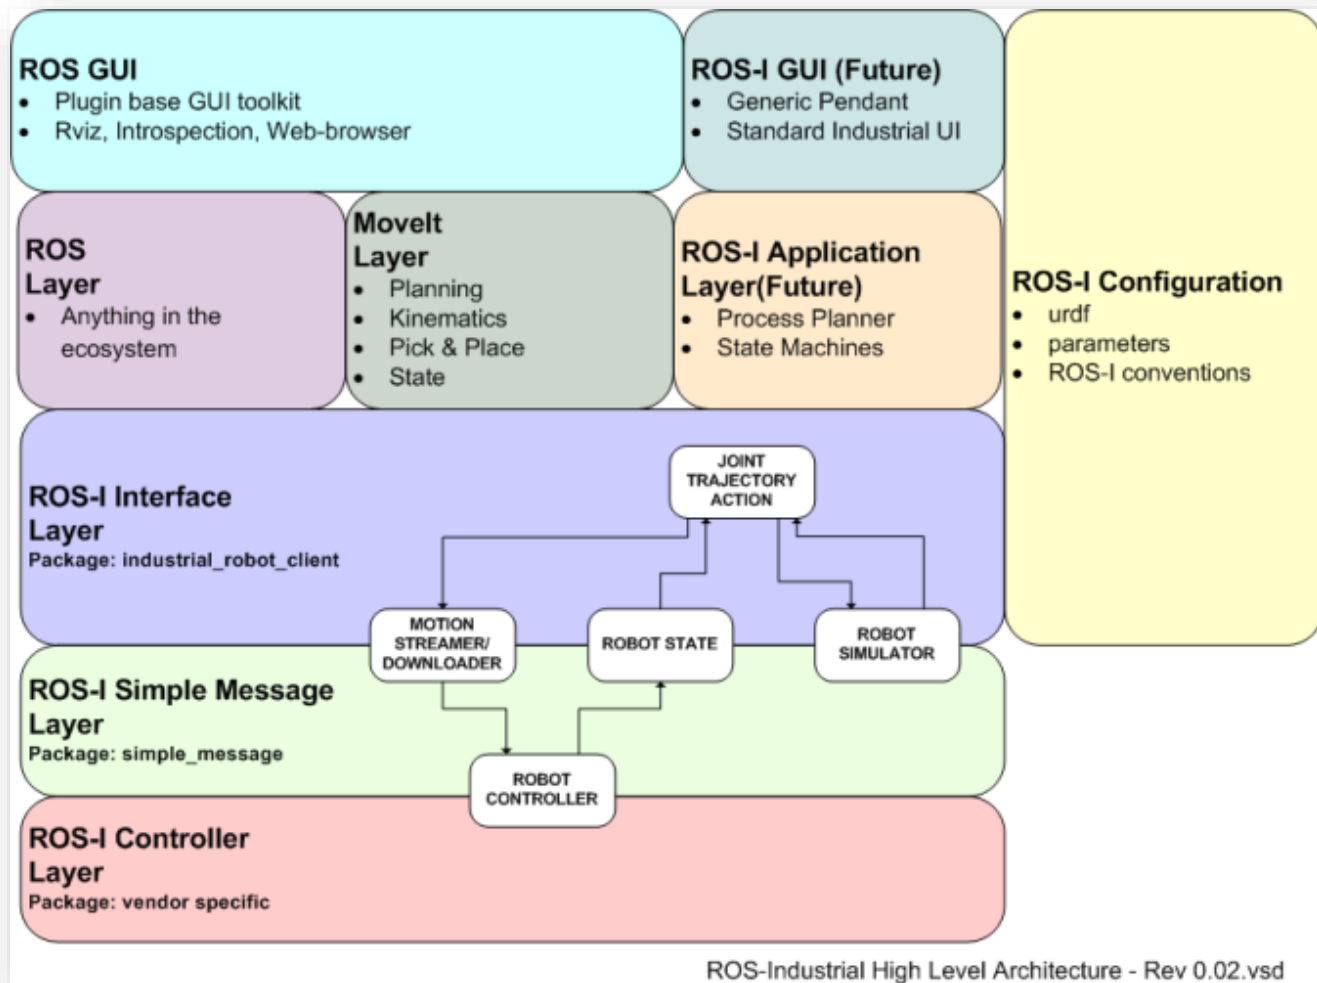

1. ROS-I框架介绍

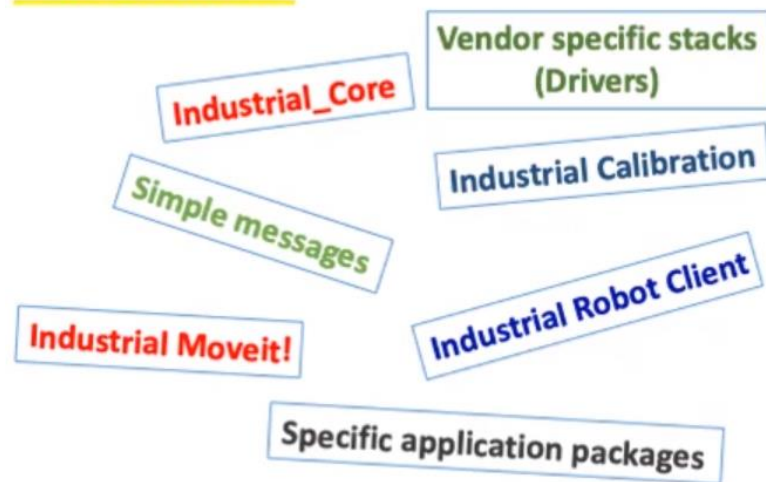

1. ROS-I框架介绍

ROS-I is a BSD (legacy) / Apache 2.0 (preferred) licensed program that contains libraries, tools and drivers for industrial hardware. It is supported and guided by the ROS-Industrial consortium.

ROS-I的总体架构

1. ROS-I框架介绍

2. ROS-I应用原理

2. ROS-I应用原理

应用与规划

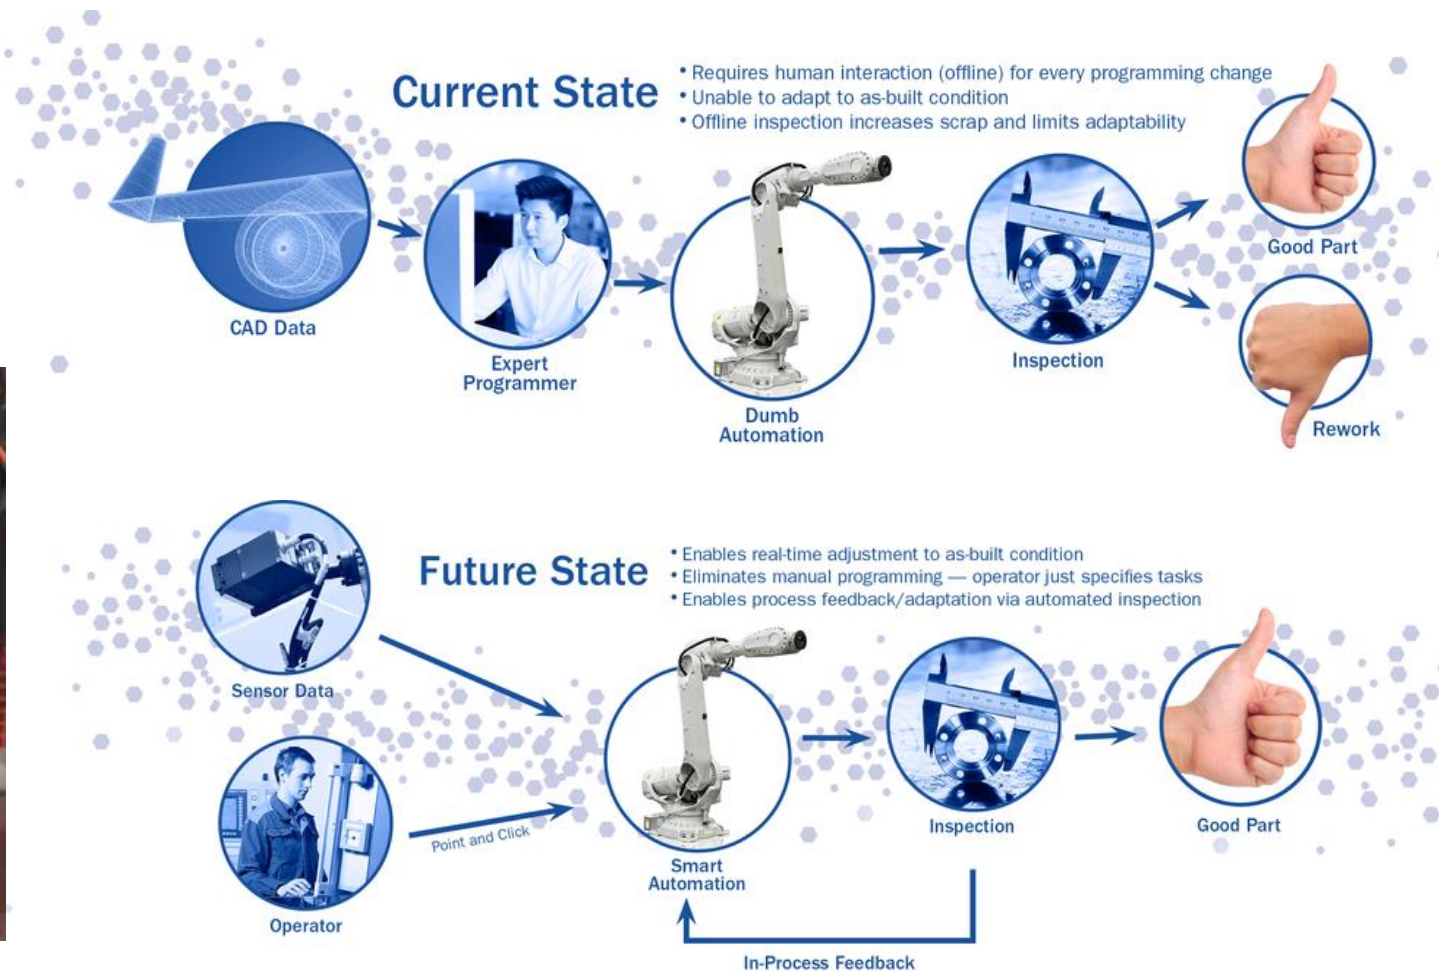

1. GUI: ROS中现在已有的UI工具和专门针对工业机器人通用的UI工具;
2. ROS Layer: ROS基础框架, 提供核心通信机制;
3. MoveIt! Layer: 为工业机器人提供规划、运动学等核心功能的解决方案;
4. ROS-I Application Layer: 处理工业生产的具体应用;

ROS-I的总体架构

Scan-N-Plan™

Scan-N-Plan technologies are a suite of tools that enable real-time robot trajectory planning from 3-D scan data.

2. ROS-I应用原理

godel	Resolved dependencies
godel_msgs	Merge pull request #201 from Jmeyer1292/feature/z_offsets
godel_param_helpers	Make all package.xml files the format 2 convention.
godel_path_execution	Make all package.xml files the format 2 convention.
godel_plugins	Changed BlendProcessExecution.action to ProcessExecution.acti
godel_polygon_offset	Make all package.xml files the format 2 convention.
godel_process_execution	Changed BlendProcessExecution.action to ProcessExecution.acti
godel_process_path_generation	Removing more unused launch files - some of which reference f
godel_process_planning	Got my process planning re-write nominally working and added
godel_robots	Rotated cage to match the new work cell configuration.
godel_scan_analysis	Using a std_srvs::Trigger type, added the ability to remotely clea
godel_simple_gui	scan state will not progress to select surface if scan fails.
godel_surface_detection	static_cast from MoveItErrorCode to bool
godel_utils	Removed dead references, added helper function to simplify En
industrial_robot_simulator_service	Make all package.xml files the format 2 convention.
meshing_plugins	Make all package.xml files the format 2 convention.
meshing_plugins_base	Make all package.xml files the format 2 convention.
path_planning_plugins	Moved keyence approach paths into process planning. Moved s
path_planning_plugins_base	Make all package.xml files the format 2 convention.

1. SCAN

Figure 1: In seconds, Scan-N-Plan software enables CAD-free recognition of flat surfaces that are eligible to blend.

3. EXECUTE

Figure 3: The robot blends the surface of each work piece.

Milestone 3 Sponsors

2. PLAN

Figure 2: In less than one second, the software computes collision-free paths to blend each of the selected surfaces.

4. INSPECT

Figure 4: After blending, the system executes a quality assurance scan with a high resolution laser line scan sensor.

Automated Painting for Aerospace

- Automated spray paint processes
 - Reduce emissions (regulation)
 - Reduce exposure (personnel)
 - Reduce cost (materials)
 - Increase quality (consistency)
- Challenges
 - Unconstrained location
 - “Random” part order
 - Real time processing
 - Moving parts

Solution: Automated Painting

- 3D Sensing (ROS/OpenNI)
- 3D Processing (ROS/PCL)
- Process based path planning (SwRI)
- Robot IK solvers (ROS/MoveIt!)
- Robot workcell visualization (ROS/Rviz)
- Distributed system (ROS/Core)
- Data acquisition/playback (ROS/bag)

2. ROS-I应用原理

- Develop and Test Unique Inkjet Technology For Large Complex Surfaces
- Demonstrate Inkjet Technology on Aircraft Application Using Large Scale Robots
- Simulated Demonstration Rotary Bell Painting on LR System Robot leveraging ROS-based path planning

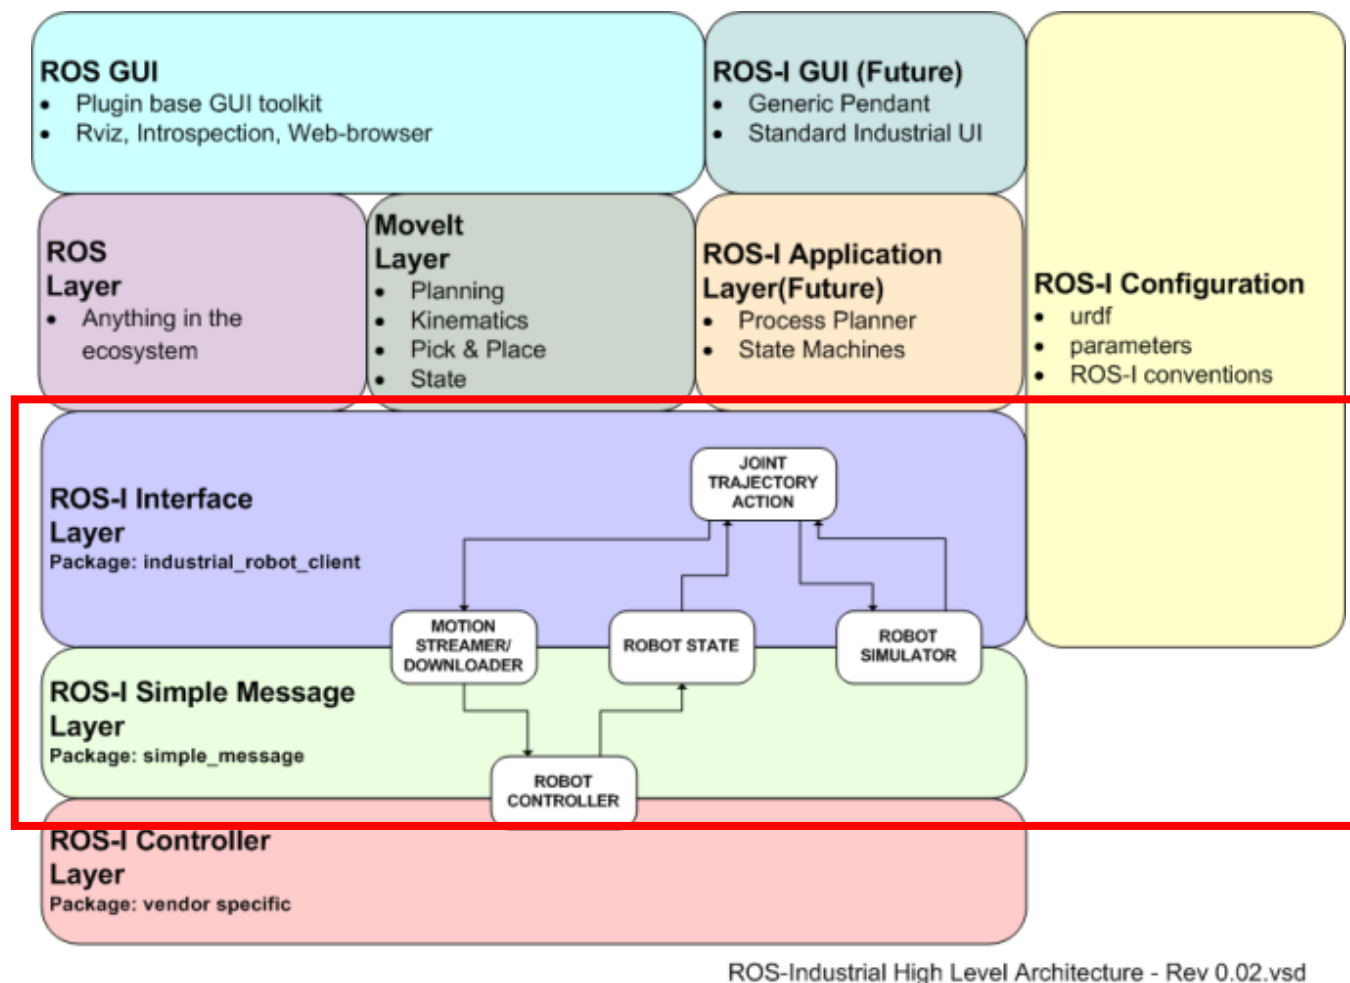

3. ROS-I代码浅析

3. ROS-I代码浅析

接口与协议

1. ROS-I Interface Layer: 接口层，工业机器人的客户端，通过 simple message协议与机器人的控制器通信；
2. ROS-I Simple Message Layer: 通信层，定义了通信的协议，打包和解析通信数据；
3. ROS-I Controller Layer: 机器人厂商开发的工业机器人控制器。

ROS-I的总体架构

3. ROS-I代码浅析

jrgnicho Merge pull request #223 from gavanderhoorn/remove_genmsg ...	
industrial_core	all: update maintainer email addresses.
industrial_deprecated	all: update maintainer email addresses.
industrial_msgs	msgs: remove unneeded genmsg dependency.
industrial_robot_client	all: update maintainer email addresses.
industrial_robot_simulator	all: update maintainer email addresses.
industrial_trajectory_filters	all: update maintainer email addresses.
industrial_utils	all: update maintainer email addresses.
simple_message	all: update maintainer email addresses.
.gitignore	Ignore some more project management related files.
.travis.yml	travis: catch up with industrial_ci improvements.
CONTRIBUTING.md	Create CONTRIBUTING.md
README.md	add docker instructions to README. (#201)

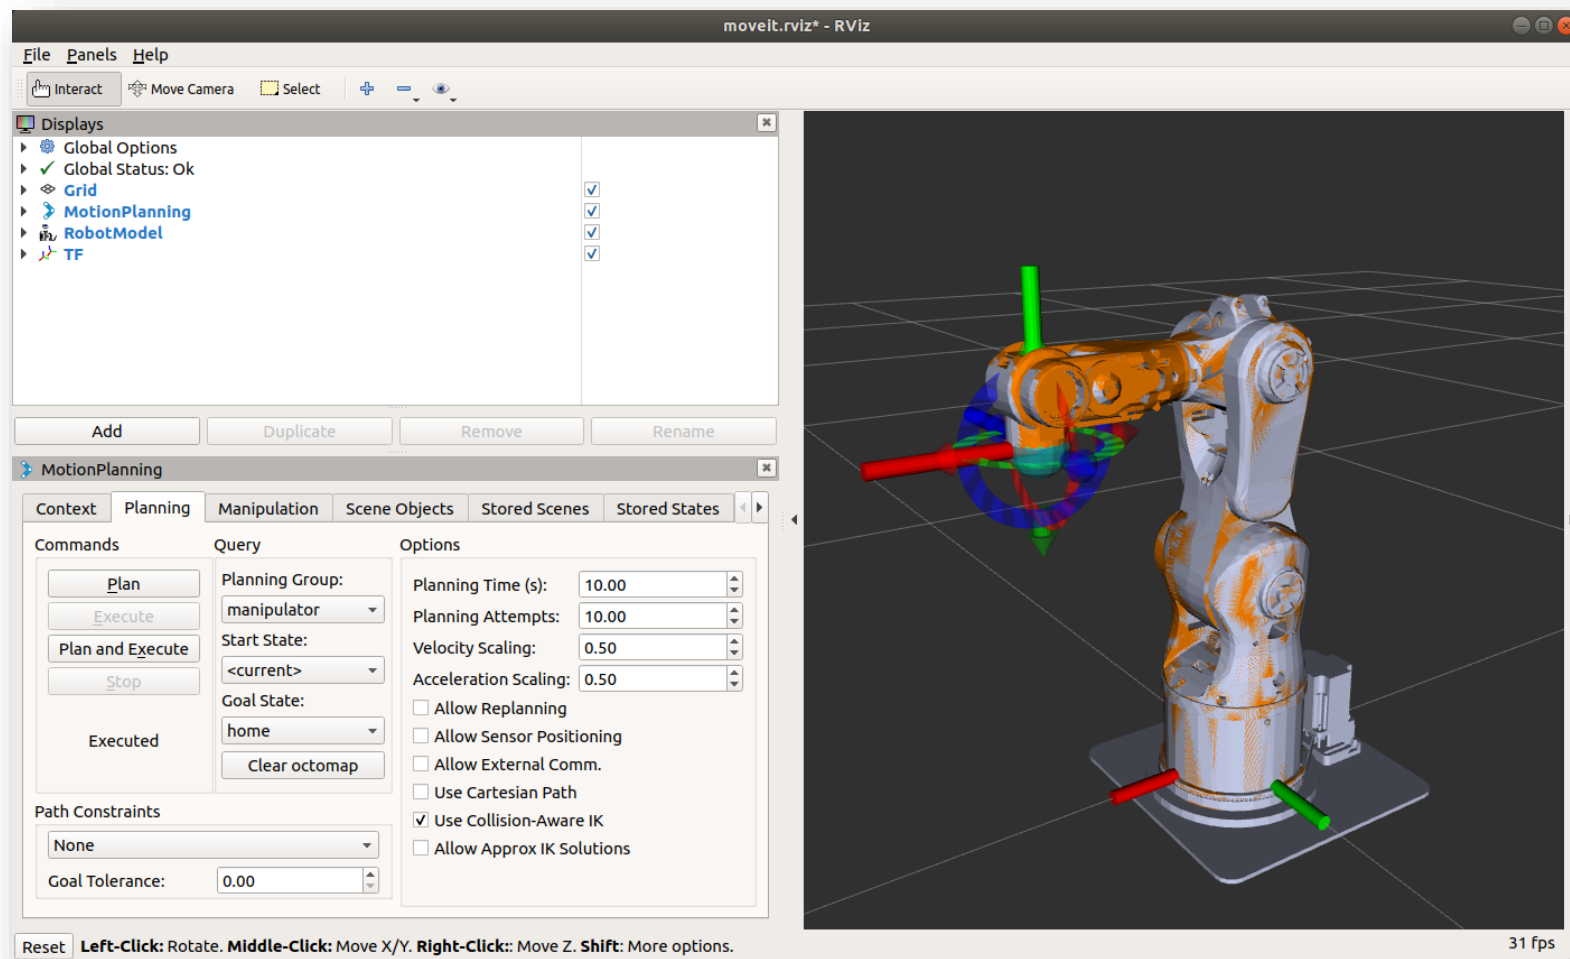

https://github.com/ros-industrial/industrial_core

核心代码浅析

3. ROS-I代码浅析

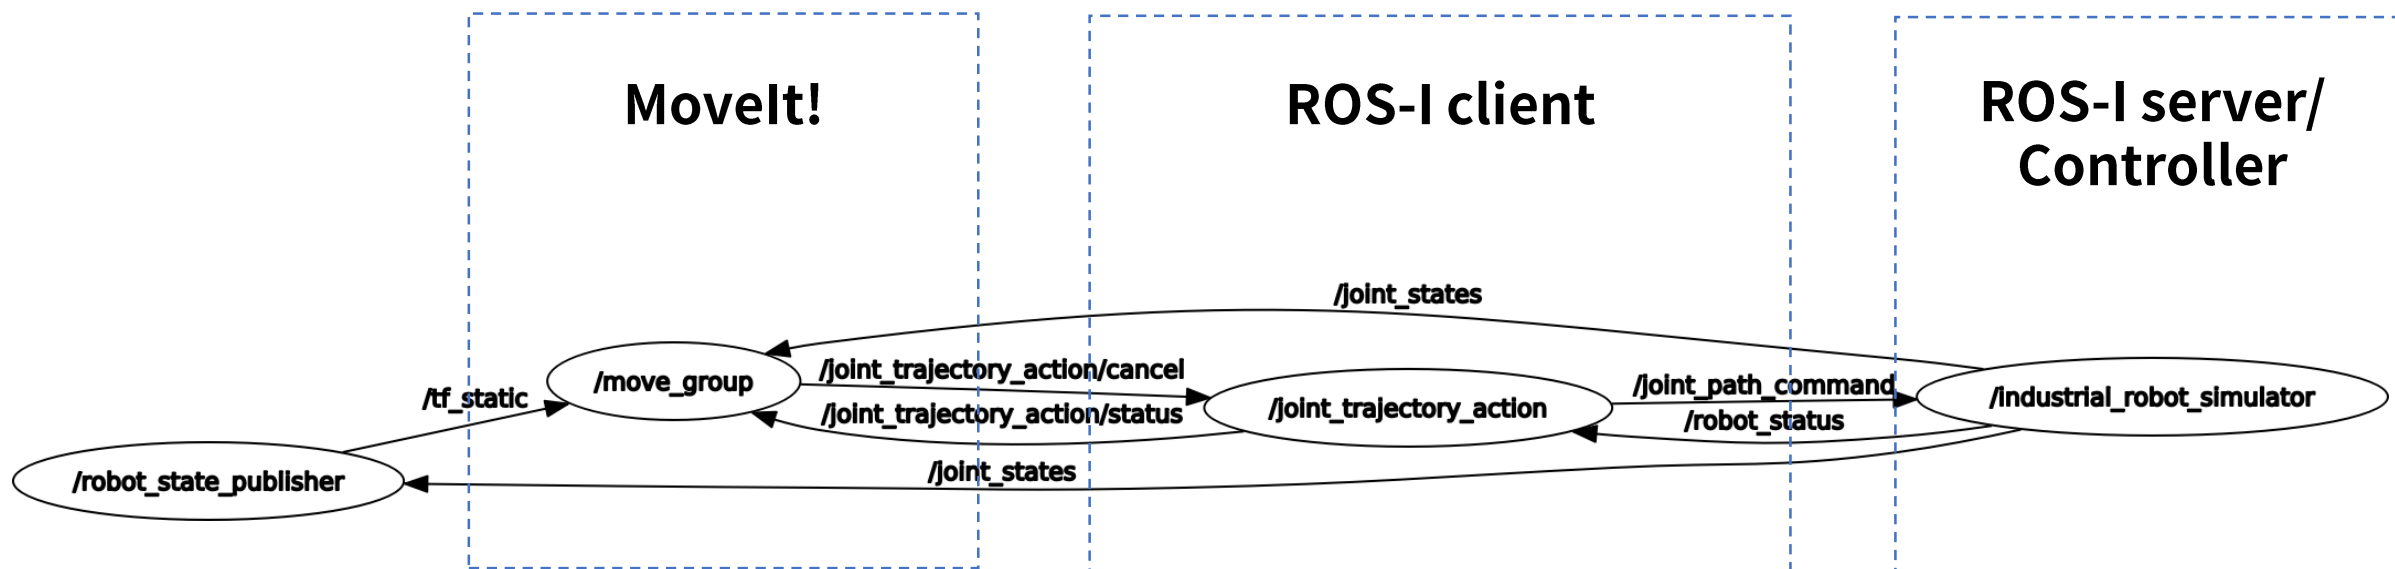

启动PROBOT Anno
ROS-I仿真

```
$ roslaunch probot_bringup probot_anno_bringup.launch sim:=true
```

3. ROS-I代码浅析

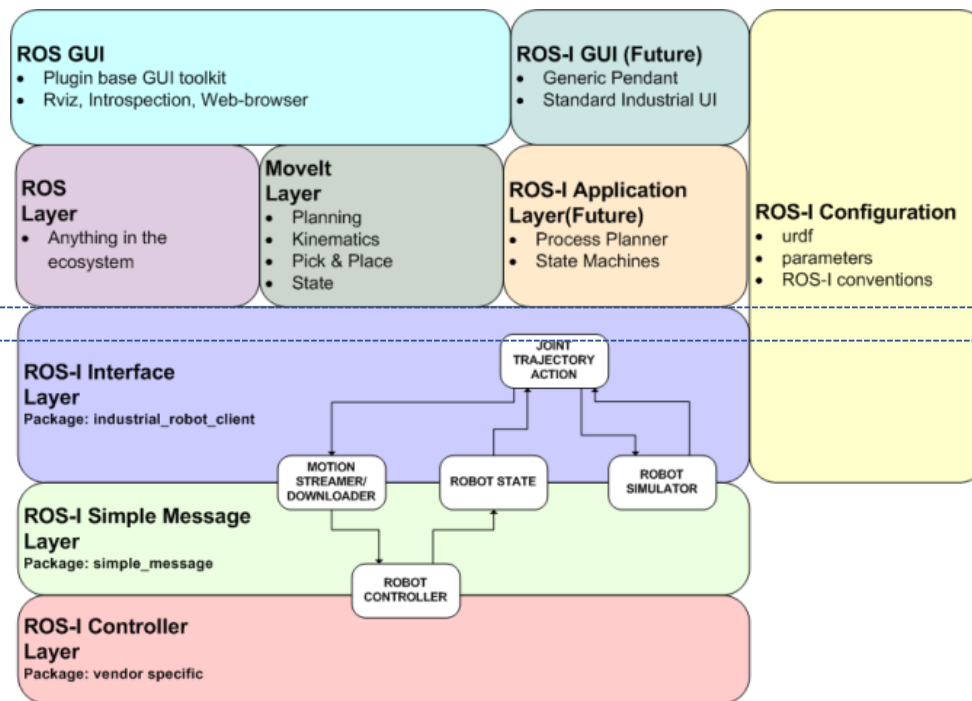

ROS-I框架介绍

- 将ROS强大的功能应用到工业生产的过程中；
- 为工业机器人的研究与应用提供快捷有效的开发途径；
- 为工业机器人创建一个强大的社区支持；
- 为工业机器人提供一站式的工业级ROS应用开发支持。

ROS-I应用原理

ROS-I代码浅析

1. 对照例程代码和运行效果，理解ROS-I框架；
2. 使用任意机械臂模型完成ROS-I仿真器环境下的配置，并控制模型运动。
